BASIC-ABSTRACT:

The conditional access system includes a subscriber's set-top decoder box (2020) which can communicate directly with the communication servers (3022) of a subscriber authorisation system (3002). Two direct connections are provided. The first connection is via telephone (4001) using a series of voice commands. A second connection is from the decoder box itself, via a dedicated link (4002), and communications are automatically carried out by the insertion of a smart card into the decoder box.

The commands from the decoder box or telephone are processed by the subscriber authorisation system which generates entitlement management messages (EMM) to allow encrypted programme data to be decrypted for a particular subscriber. The EMMs are sent directly back to the subscriber via the dedicated link.

ADVANTAGE - Viewing authorisation is quickly obtained due to the use of a dedicated link between the subscriber's set-top decoder box and the subscriber authorisation system.
